

RainbowCORE Upgrade Guide

Important things to know before starting

Note:

This guide assumes that you made customizations to the files. If you haven't made any customizations, you can do the same as installing the files and just drag and drop the files. **If you have made no customizations**, go to the [Installing the Files](#) section of this document.

If you have made customizations be sure to **back them up** before starting this.

If you are installing from 1.0 to 1.1, there is a different guide. Find the **RainbowCORE_Install_Guide_1.1.pdf**

Gathering the files

Download the new files - <https://github.com/MarcusNTuttle/RainbowCORE/releases>

Just like when installing you want to download and extract the **RainbowCORE_X.X.zip**

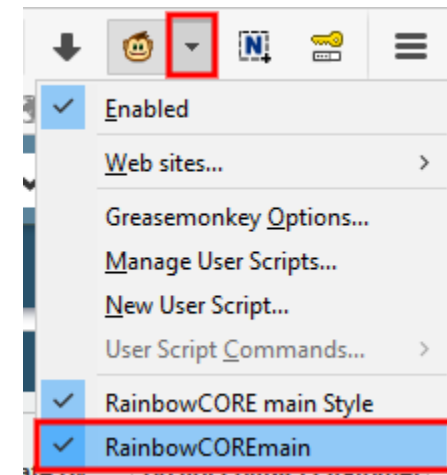

Opening your current files

1. Go to Firefox and open HelpDesk (**you must be on the website the script runs on to see the next items**)
2. In the right corner of your browser, left click the down arrow next to the monkey
3. right click the file you want to edit.

This will then open a new page with the script itself.

```
C:\Users\mtuttle\AppData\Roaming\Mozilla\Firefox\Profiles\tym117r6.default\gm_scripts\colorCode\colorCode.user.js

```

RainbowCORE_main.user.js

- The diagram illustrates the process of overwriting code in a file. It shows two side-by-side code editors. The left editor, with a dark background, contains a file with a 'Start of Variables Block' and an 'End of Variables Block'. A red arrow points from the right editor to the left one, indicating the transfer of code. The right editor, with a light background, shows the same code blocks. Red text instructions are overlaid on each editor: 'Overwrite the code between these blocks with your new file' on the left and 'Copy code between these blocks in your current file' on the right.

Overwrite the code between these blocks with your new file

Copy code between these blocks in your current file

Currently there is no way to simply combine these files and maintain the changes you made. Your best option will be to compare the new and the current. Hopefully there will be a way to maintain these changes in the future.

1. Drag and Drop each file to your Firefox window, and click install when prompted
