

RainbowCORE Upgrade Guide from 1.0 to 1.1

Important things to know before starting

Note:

This guide assumes that you made customizations to the files. If you haven't made any customizations, you can do the same as installing the files and just drag and drop the files. **If you have made no customizations**, go to the [Installing the Files](#) section of this document.

If you have made customizations be sure to **back them up** before starting this.

This guide is only related to the 1.0 to 1.1. If you are not upgrading for these versions, there is a different guide. Find the **RainbowCORE_Install_Guide.pdf**

Gathering the files

Download the new files - <https://github.com/MarcusNTuttle/RainbowCORE/releases>

Just like when installing you want to download and extract the **RainbowCORE_1.1.zip**

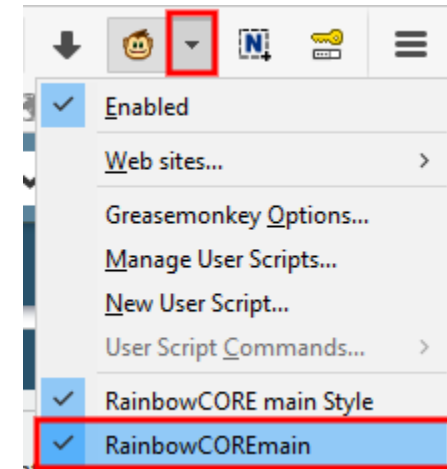

Opening your current files

1. Go to Firefox and open HelpDesk (**you must be on the website the script runs on to see the next items**)
2. In the right corner of your browser, left click the down arrow next to the monkey
3. right click the file you want to edit.

This will then open a new page with the script itself.

```
C:\Users\mtuttle\AppData\Roaming\Mozilla\Firefox\Profiles\bym117r6.default\gm_scripts\colorCode\colorCode.user.js
File Edit View Help
Open File... Save Save As... Pretty Print
1 // ==UserScript==
2 // @name      RainbowCOREmain
3 // @author    MarcusTuttle
4 // @namespace  https://www.MarcusTuttle.com
5 // @description This script contains the main functions for RainbowCORE.
6 // @include   https://releavr.etq.com/*
7 // @version   1.1
8 // @grant     GM_addStyle
9 // @require   https://ajax.googleapis.com/ajax/libs/jquery/2.2.4/jquery.min.js
10 // ==/UserScript==
11
12 this.$ = this.jQuery = jQuery.noConflict(true); //allows all of this to work without breaking Reliance
13
14
15
```

Combing the Files

RainbowCORE_main.user.js

1. Open your current *RainbowCORE_main.user.js* using Firefox (as show in the previous step) and the new *RainbowCORE_main.user.js* in a text editor.
2. In your current file (your version 1.0 file) you want to copy all the settings **starting right after** the "*Variables Block Start...*" **to right before** the "*Current Support Views Configurations*" block.

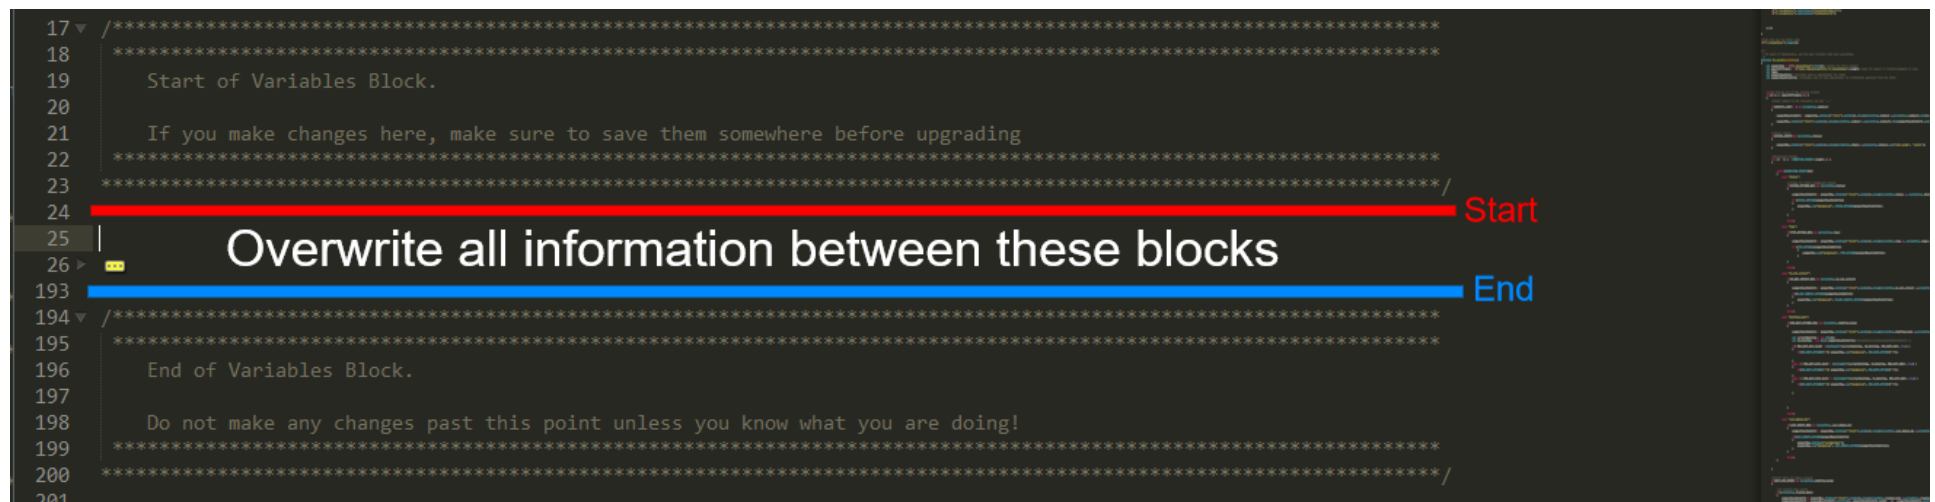

```
28 /*****
29 Variables Block Start. Change these to Customize Settings.
30
31
32
198
199
200
201 Current Support Views Configurations
202 Make changes to these if columns are removed, added, or the order is changed.
203 *****/
```

Start

End

Copy information between these blocks

3. **Paste and Overwrite** what you just copied in step 2 into the new file (version 1.1) **starting right after** from the "*Start of Variables Block*" **to right before** the "*End of Variables Block*"

```
17 /*****
18
19 Start of Variables Block.
20
21 If you make changes here, make sure to save them somewhere before upgrading
22 *****/
23
24
25
26
193
194 /*****
195
196 End of Variables Block.
197
198 Do not make any changes past this point unless you know what you are doing!
199 *****/
200
201 *****/
```

Start

End

Overwrite all information between these blocks

RainbowCORE_style.user.js

Currently there is no way to simply combine these files and maintain the changes you made. Your best option will be to compare the new and the current. Hopefully there will be a way to maintain these changes in the future.

Installing the Files

1. Drag and Drop each file to your Firefox window, and click install when prompted
